Part Number: 992.105-3-4— Technical Sheet Combo Standard Medical Arm, height adjustable, 300 mm, for display, keyboard and mouse, 23 - 40 mm variable pole mounting

Part Number: 992.105-4-1— Presentation Combo Standard Medical Arm, height adjustable, 300 mm, for display, keyboard and mouse, 23 - 40 mm variable pole mounting

Combo Standard Medical Arm, height adjustable, 300 mm, for display, keyboard and mouse, 23 - 40 mm variable pole mounting

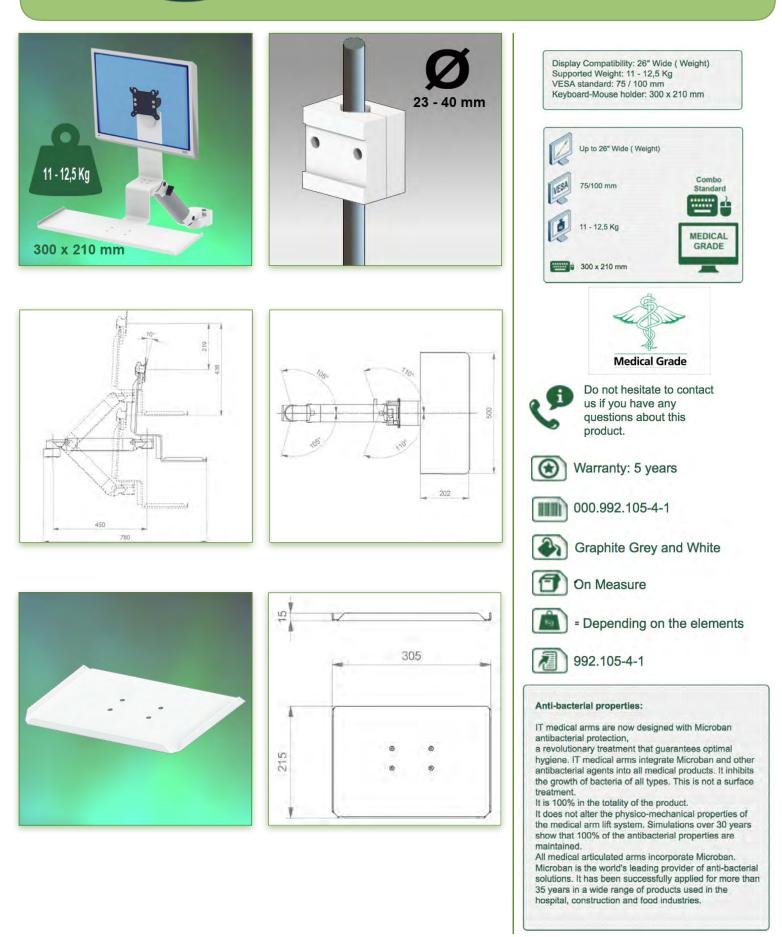

This 300 mm Horizontal Combo Medical Arm with gas spring height adjustment allows the LCD screen to be perfectly fixed, oriented and adjusted and supports the keyboard and mouse. It is coated with an anti-microbial agent offering hygiene and cleaning down to the last detail. Its modern design has been specially designed for healthcare environments.

Technical specifications:

- * Integrated cable channel
- * Equipotential bonding
- * Mounting on 23 40 mm variable pole, variable ring included.
- * This medical arm simply comes to be fixed on a pole whose diameter is 23 40 mm and then adjust to the desired and fixed height.
- * It has a safety stop button for the height adjustment, which allows the arm to remain in the chosen position.
- * The head of this arm complies with the screen mounting standard: VESA MIS-D 75 mm and 100 mm.
- * Compatible with screens whose weight does not exceed 11-12,5 Kg.
- * Touch screen stability. * Screen tilt: 10°.
- * Screen rotation: 110° right, 110° left.
- * Arm rotation: 105° to the right, 105° to the left.
- * Height adjustment: 45° down, 45° up * Total length 780 mm
- * Keyboard and Mouse Stand: 300 x 210 mm
- * Compatible with multimedia terminals (TMM)
- * Colour RAL 7024 (Graphite grey) and White
- * All our medical arms are in conformity:
 - CE, ROHS, Medical Grade, Regulations MDD 93/42 ECC.
- * Warranty: 5 years

- * Mounting on 23 40 mm variable pole, variable ring included.
 * This medical arm simply comes to be fixed on a pole whose diameter is 23 40 mm and then adjust to the desired and fixed height.
- * It has a safety stop button for the height adjustment, which allows the arm to remain in the chosen position.
- * The head of this arm complies with the screen mounting standard: VESA MIS-D 75 mm and 100 mm.
- * Compatible with screens whose weight does not exceed 13 16,5 Kg.
- * Touch screen stability. * Screen tilt: 10°.
- * Screen rotation: 110° right, 110° left.
- * Arm rotation: 105° to the right, 105° to the left.
- * Height adjustment: 45° down, 45° up
- * Total length 1010 mm
- * Keyboard and Mouse Stand: 580 x 200 mm
- * Compatible with multimedia terminals (TMM)
- * Colour RAL 7024 (Graphite grey) and White
- * All our medical arms are in conformity:
- CE, ROHS, Medical Grade, Regulations MDD 93/42 ECC.
- * Warranty: 5 years

Part Number: 992.582-5-4— Technical Sheet Combo Standard Medical Arm, height adjustable, 300 + 240 mm, for display, keyboard and mouse, 23 - 40 mm variable pole mounting

Anti-bacterial properties:

IT medical arms are now designed with Microban antibacterial protection,

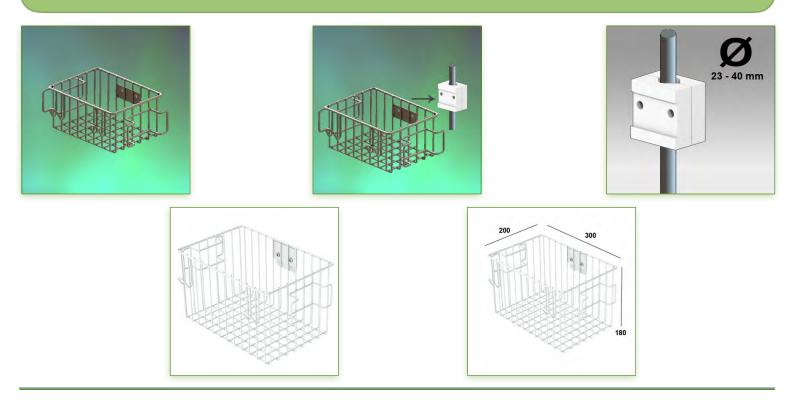

a revolutionary treatment that guarantees optimal hygiene. IT medical arms integrate Microban and other antibacterial agents into all medical products. It inhibits the growth of bacteria of all types. This is not a surface treatment.

- It is 100% in the totality of the product.
- It does not alter the physico-mechanical properties of the medical arm lift system. Simulations over 30 years show that 100% of the antibacterial properties are maintained.

All medical articulated arms incorporate Microban. Microban is the world's leading provider of anti-bacterial solutions. It has been successfully applied for more than 35 years in a wide range of products used in the hospital, construction and food industries.

Médical Grade

Innovative designs, a StS® shortened elevator technology with a factor 6 gas lift that makes computer medical elevation elevation effortlessly unmatched in the industry.

This StS ® technology offers smooth adjustment flexibility regardless of the size and strength of the user, allowing him to maximize his comfort of use both sitting and standing. The revolutionary design of the StS technology separates from conventional technologies that do not meet the safety factor standards generally used in this type of design.

A sTs elevator technology that is not under pressure, which means that your long-term performance will remain higher.

Designed for prolonged sitting or permanent applications. The sTs technology offers a true revolution in ergonomic design that can be used by a wide range of clinicians and caregivers of all sizes, allowing them to adjust the height of the medical arm.

Robust, anodized aluminum construction, complemented by a small footprint, makes computer medical arms accessible even in places where space is at a premium.

These computerized medical workstations contribute to the encoding of critical patient care information with comfort at the patient's bedside with unmatched travel comfort.

Computerized medical arms comply with hospital hygiene standards, effectively they contain less than 5% of plastic harmful to bacteria and can be disinfected in the smallest details.

An anti-bacterial coating (microban) ensures perfect hygiene of arms and all parts are therefore impermeable to bacteria, no asperities in their designs aimed at a complete cleaning, fast and easy, helping to control infections.

It takes only 10 minutes to completely disinfect the workstation.

Human-centered designs place mobile computing exactly where it needs to be, reducing the time spent on each task for more efficiency.

the fruit of a close collaboration with the nurses, the computer scientists, the doctors, offering them a comfort and an ergonomics unparalleled in the data entry.

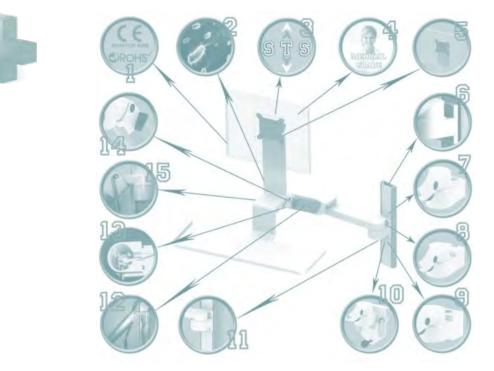

These medical computer arm solutions offer healthy computing environments that promote work efficiency.

Developed for superior performance, quality, durability for a better return on investment. Designed and created to minimize the impact of energy consumption and thereby reduce the harmful effects of air emissions and pollution.

Backed by a 5 year warranty, our solutions will give you all satisfactions.

An Exceptional Experience! "Often copied, never equaled"

Unmatched in technology, comfort and installation

- 1 / Compliant and CE and ROHS / DIN EN ISO 9001: 2008 certified
- 2 / Anti-bacterial coating
- 3 / Height adjustable technology
- 4 / Medical Standards
- 5 / VESA 75 and 100 mm
- 6 / Possibility of mounting on Din Wall Rail optional
- 7 / Possibility of mounting on fixed pole, 25 35 38 mm
- 8 / Possibility of mounting on Din Vertical Rail 10 x 25 mm
- 9 / Possibility of mounting on variable pole between 20 and 40 mm
- 10 / Possible installation on DIN Rail Horizontal, 10 x 25 8 x 35 10 x 30 10 x 50 mm
- 11 / Optional column mounting option
- 12 / Cable entry and internal connector on the arm (internal chute supplied)
- 13 / Equipotential bonding and connector
- 14 / Adjustment and safety lever
- 15 / Adjustment and easy control of the gas cylinder

Bacteria-proof

Plastic, even food, is porous. This porosity, accentuated by scratches can cause bacteria nests in computerized medical arms during these constant manipulations. A biofilm can be put in place in a few hours, and allow the bacteria there to become resistant to external agents.

This is why our Computer Medical Arms, contrary to what we find on the market have a complete structure in anodized aluminum. Less than 5% of plastic in their designs dedicated specifically to the medical and hospital sector.

Aluminum, its characteristics, its properties, its utility:

Main characteristics

Density: 2700 kg / m3

Density: 2.7 (three times less than steel)

The use of aluminum is therefore essential in the areas of the construction of our computer arms.

Corrosion resistance:

Aluminum alloys are highly oxidizable. In the air, a layer of a few micrometers of aluminum oxide (Al2O3) is formed. Thanks to this thin film, aluminum alloys become resistant to corrosion. Unlike most metals, aluminum needs to oxidize to be used. Without this film of oxide, it would be unsuitable for most of its applications.

Thus, under normal atmospheric conditions, exterior building claddings or aluminum alloy parts have minimal maintenance and extended service life.

Anodizing:

Forced oxidation with an electrolyte makes it possible to obtain coloring of the parts. This anodizing can also be colorless to keep the shine of the pieces (aluminum color). The protective oxide layer can be made thicker by anodization.

Recycling:

To recycle aluminum, there is nothing simpler: just melt it. In addition to environmental benefits, aluminum recycling is much less expensive than extraction from bauxite ore. It requires 95% less energy. And a ton of recycled aluminum saves four tons of bauxite. By skipping the electrolysis stage, which requires a lot of energy, we avoid the pollutant emissions associated with it. Aluminum is almost infinitely recyclable without losing its qualities. In France, aluminum is recovered as part of selective sorting. In sorting centers, it is sorted thanks to eddy currents. It is then broken and crushed and melted. The downside, aluminum remains on the market an expensive material.

Benefit:

- * Resistant to corrosion
- * Unalterable color
- * Rigid
- * Allows 100% recycling
- * Light
- * Noise and vibration reduction
- * Do not rust
- * Longevity is three to four times greater than steel
- * Absorbs considerable pressure and effort
- * Insulation
- * Effective barrier against bacteria
- * Raincoat
- * Resistant to high and low temperatures
- * Sterilizable
- * Strength, weight, versatility
- * Do not burn
- * Anti acid

Antibacterial Micoban:

The medical computer arms are now designed with Microban antibacterial protection, a revolutionary treatment that guarantees optimal hygiene. Medical computer arms integrate Microban and other anti-bacterial agents into all medical products. It inhibits the growth of bacteria of all types. It is not a superficial treatment. It is 100% in the entire product. It does not entail any alteration of the physico-mechanical properties of the lift system of the medical arms. 30-year simulations show that 100% of anti-bacterial properties are maintained. All medical articulated arms incorporate Microban. Microban is a world leader in anti-bacterial solutions. It has been successfully applied for more than 35 years in multiple products used in the hospital, construction and food sectors.

Safety factor - Load with sixfold safety factor

EramoFlex.

The factor of safety is the use of more elements than necessary to compensate for the effects of unknown variables and to prevent system failures.

Design requires dealing with the unknown. Whatever the designer's level of knowledge and the quality of the specifications, hypotheses are inevitable in any design process.

The safety factors are used to offset the potential effects of these unknowns. The idea is to add materials and components to the system so that the design exceeds the specifications defined as necessary to meet the needs.

For example, designing an internet service that can support thousands of users is straightforward and straightforward. However, to take into account unanticipated needs for example downloading large files, the specifications of the need can be multiplied (here in threes).

In this case, the safety factor of three means that the service is qualified as being able to support 1000 users but is designated to actually support 3000.

The level of the safety factor corresponds directly to the level of ignorance of the design parameters. The higher the level of ignorance, the more the safety factor will be increased. More elements mean a higher cost.

The novelties require an important factor of safety. If a design becomes reliable over time, the confidence that the unknowns of the system disappear combined with the pressure to reduce costs causes a process of trimming and reducing the factor of safety.

Unfortunately, this process usually continues until an accident or malfunction occurs.

The safety factor must be used to minimize the risk of design failure. When the level of confidence in the design increases, we can then decrease the coefficient of safety but we must be careful not to go too far.

It is necessary to observe the nominal capacity of a system to make decisions that stress the limits of the system and not the expected capacity.

That is why all our medical arms are certified with a safety factor of 6 for your safety and that of your patients.

Disinfection, cleaning and hygiene of medical arms

Innovative designs, a StS® shortened lift technology with a factor 6 gas jack that allows the arms Hospital-acquired infections are a real public health problem. There are nowadays in France, about 10,000 deaths per year of these infections contracted at the hospital. They represent a very heavy burden for society, from a human, economic and social point of view. As a result, medical computer trolleys have been designed to be disinfected in their totality and disinfection takes only a very short time for the hygienist (less than 10 minutes).

WHY KEEP THE SAFE SURFACES?

- * Pathogenic microorganisms that enter the premises can survive on surfaces for long periods of time. periods of time.
- * Microorganisms that settle on surfaces can then be transmitted to the hands.
- * The germs of the hands can spread by contact, and be transmitted to other people and cause an infection.
- * Clean or disinfect surfaces to reduce the risk of cross-contamination.
- * Clean water may become contaminated if its container is not clean.

Recommended disinfectants:

- 1. Chlorine-based (10% max solution) Chlorox, Novalsan, etc.
- 2. Formaldehyde base 37% formaldehyde solution, Vinco Formaldegen, etc.
- 3. Glutaraldehyde-based stock Aldacide 200, Lysofume, Wavicide, etc.
- 4. Phenol stock base Lysol IC, many, Magna Clean, Tek-Trol, etc.
- 5. Alcohol Based CaviCide, Isopropyl Alcohol, Medicide (POL-0.3), etc.
- 6. Oxidants Hydrogen Peroxide Solution 3%, VikronS, Lifegard series, etc.
- 7. Ammonium quaternaries Roccal-D, Bacto-Sep, Ascend, Parvosol, etc.
- 8. Soap and hot water

DO NOT USE:

- 1. Oil-based liquid cleaners, such as gasoline, turpentine or petroleum
- 2. Acetone
- **3.** More than 10% bleach solutions
- **4.** Temperature or sterilization pressure

Ergonomics of workstations on screen

ErgonoFlex

Determination of posture

A good design of an on-screen workstation allows:

* increase the postural margin of the operator; any posture, however ideal, becoming uncomfortable after a certain time (pain in the shoulders, arms, hands, neck, back and legs),

* to reduce the stresses of the cervical vertebrae and the muscles supporting the head (cervicalgia, muscular fatigue),

* * to reduce the disorders due to a sustained cognitive and visual activity

(headache, tingling, tearing, visual discomfort, etc.),

* to increase blood circulation in the legs, ...

Follow these two steps to improve the comfort of your workstation:

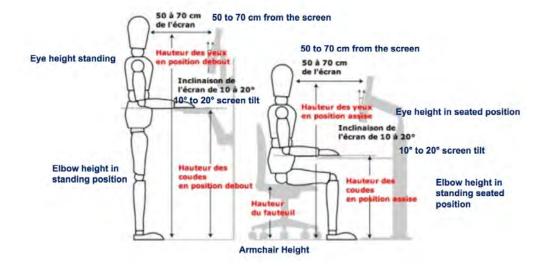

1. Select your size (in cm):

152	105	141	57	93	36
155	107	144	58	94	37
157	110	146	59	95	38
160	111	148	60	97	38
163	113	151	61	99	39
165	115	153	62	101	40
168	117	156	63	102	41
170	118	158	64	104	41
173	120	161	65	106	42
175	122	163	66	108	43
178	124	166	67	109	44
180	125	168	68	111	44
183	127	171	68	112	46
185	129	173	69	113	46
188	131	175	72	116	48
191	133	178	72	117	48

P 172

2. Install / adjust the workstation components as described below:

ErgenoFlex.

Positions

The eyes should be aligned with the top of the display surface of the screen (specifically, the center of the screen should be at an angle of 15 degrees to the horizontal at eye level).

Exception: For wearers of progressive lenses, lower the monitor and tilt the screen up to avoid neck pain.

The height of the elbows should be adjusted with the top of the keyboard.

The height of the chair should help to keep the feet flat when the hips are at a 90 ° angle.

A seat slightly inclined downward (3 to 5 degrees) allows to better respect the natural curvature of the spine in double "S", which relieves the lumbar vertebrae.

Remarks

These values do not take into account the clothing elements. Remember to add the height of the shoes to make the right measurements.

Remember that no posture can be preserved for a long time, the postural margin being a fundamental element of comfort.

Beyond its standard recommendations, it is important to consider the location of the various elements at the station, the characteristics and distribution of the various tasks, the environmental context (thermal, acoustic and luminous environment), the collective context of the activity. (stress, mutual assistance, conflicting injunctions, etc.) and any particularities or restrictions of aptitude of the operator concerned.

Be careful not to make the mistake (made by both the operators and the companies specialized in tertiary installations) to position the screen face or back to the window but perpendicular to avoid direct glare (sometimes effective but not perceived) or the reflections of the screen.

We have all the solutions and offer you the widest choice of professional medical

systems and supports compatible with the widest possible range of medical

displays and keyboards.
